

gridcontrol

Networked Process Managers

Who am I?

- CEO & Founder at Keymetrics.io
- Author of PM2
- Drone Racer
- Technologist

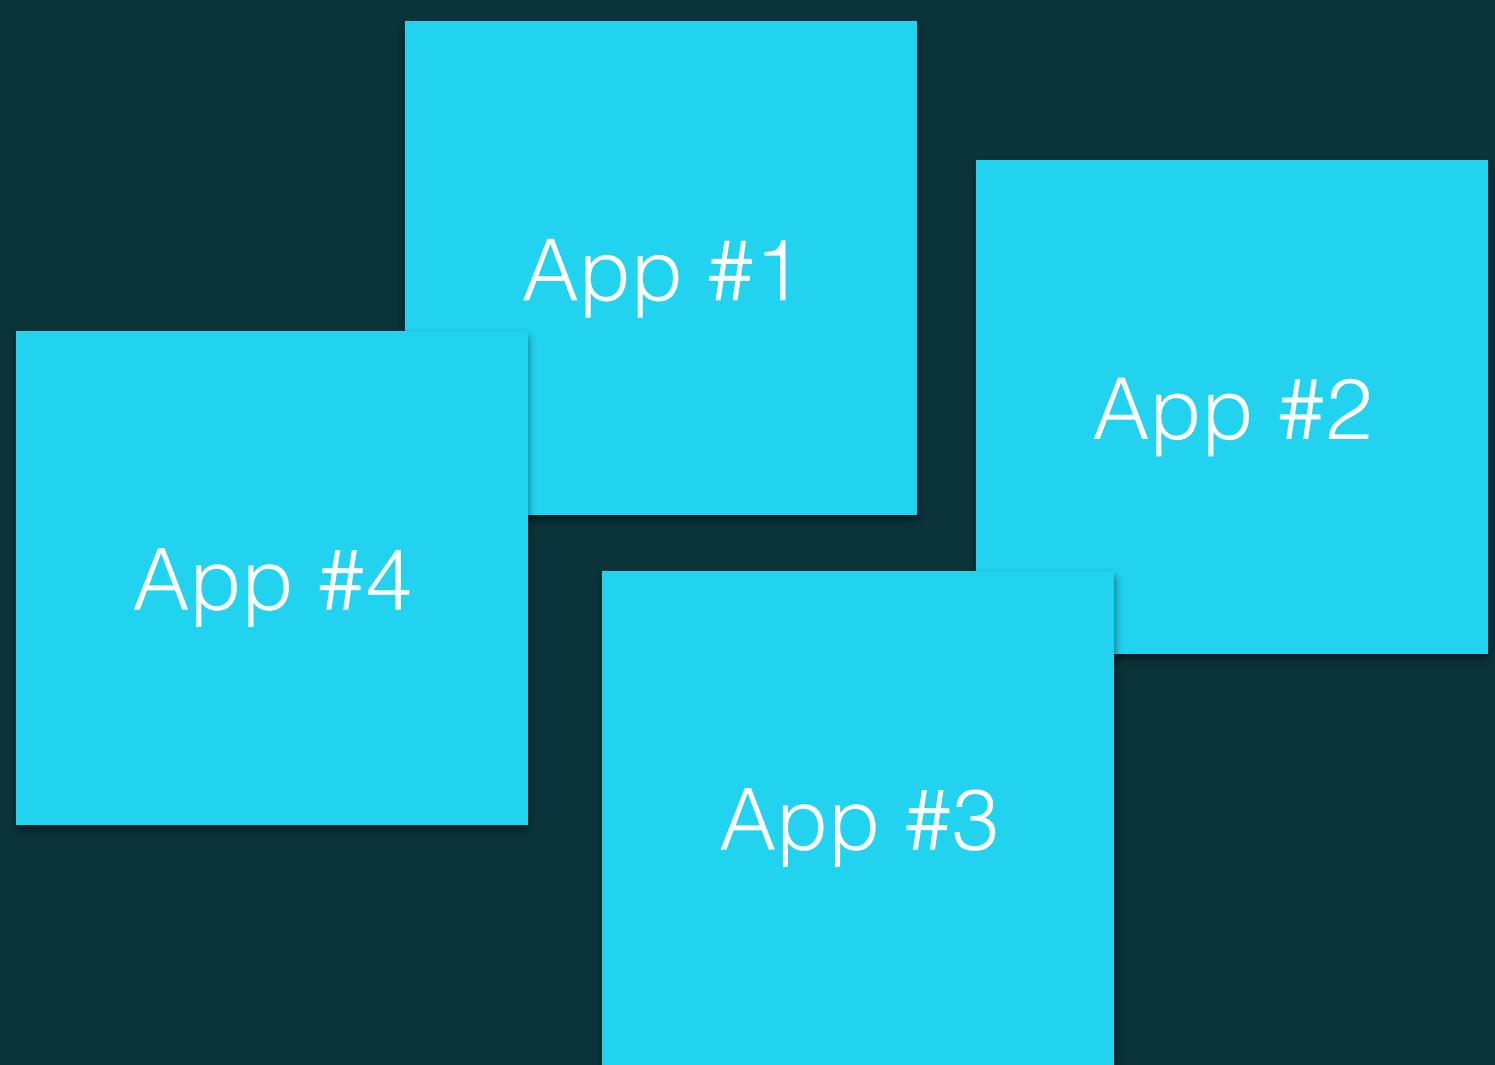

Let's talk about
Process Manager

PM2

Process Manager
with a **Built-in load balancer**
that **Guarantees Uptime**
and **help you manage your processes**

Before

To

**Disorganized
application & workflow**

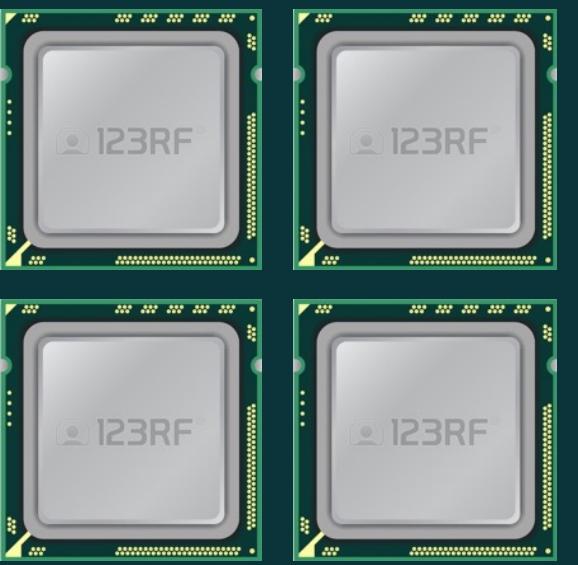

After

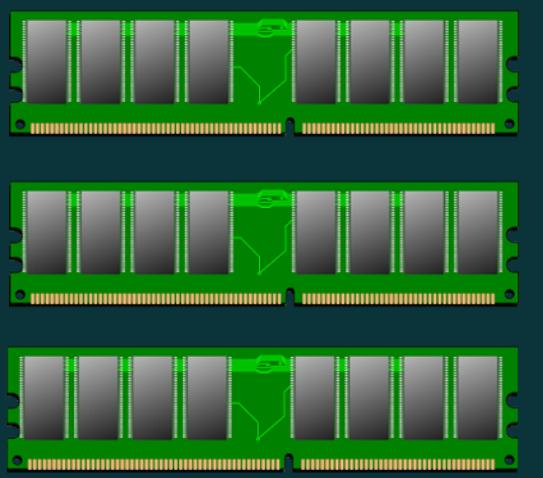

**Structured
application & workflow**

Ressources
management
and
optimization

CPU

Memory

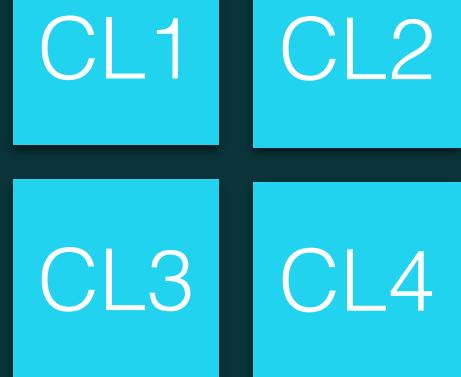

Modules

Extend
capabilities

App #1

App #3

App #4

EPM2

Usability

Log

Deployment

Easier
software
management

PM2: Some figures

- **14.000+** stars on GitHub
- **12.000.000+** downloads
- **84th** most popular JS project*
- **120+** contributors
- **1000+** tests

* <http://stats.js.org/>

PM2

PM2 CLI Overview

Install PM2:

```
$ npm install pm2 -g
```

Start an app:

```
$ pm2 start [app.js|process.json]
```

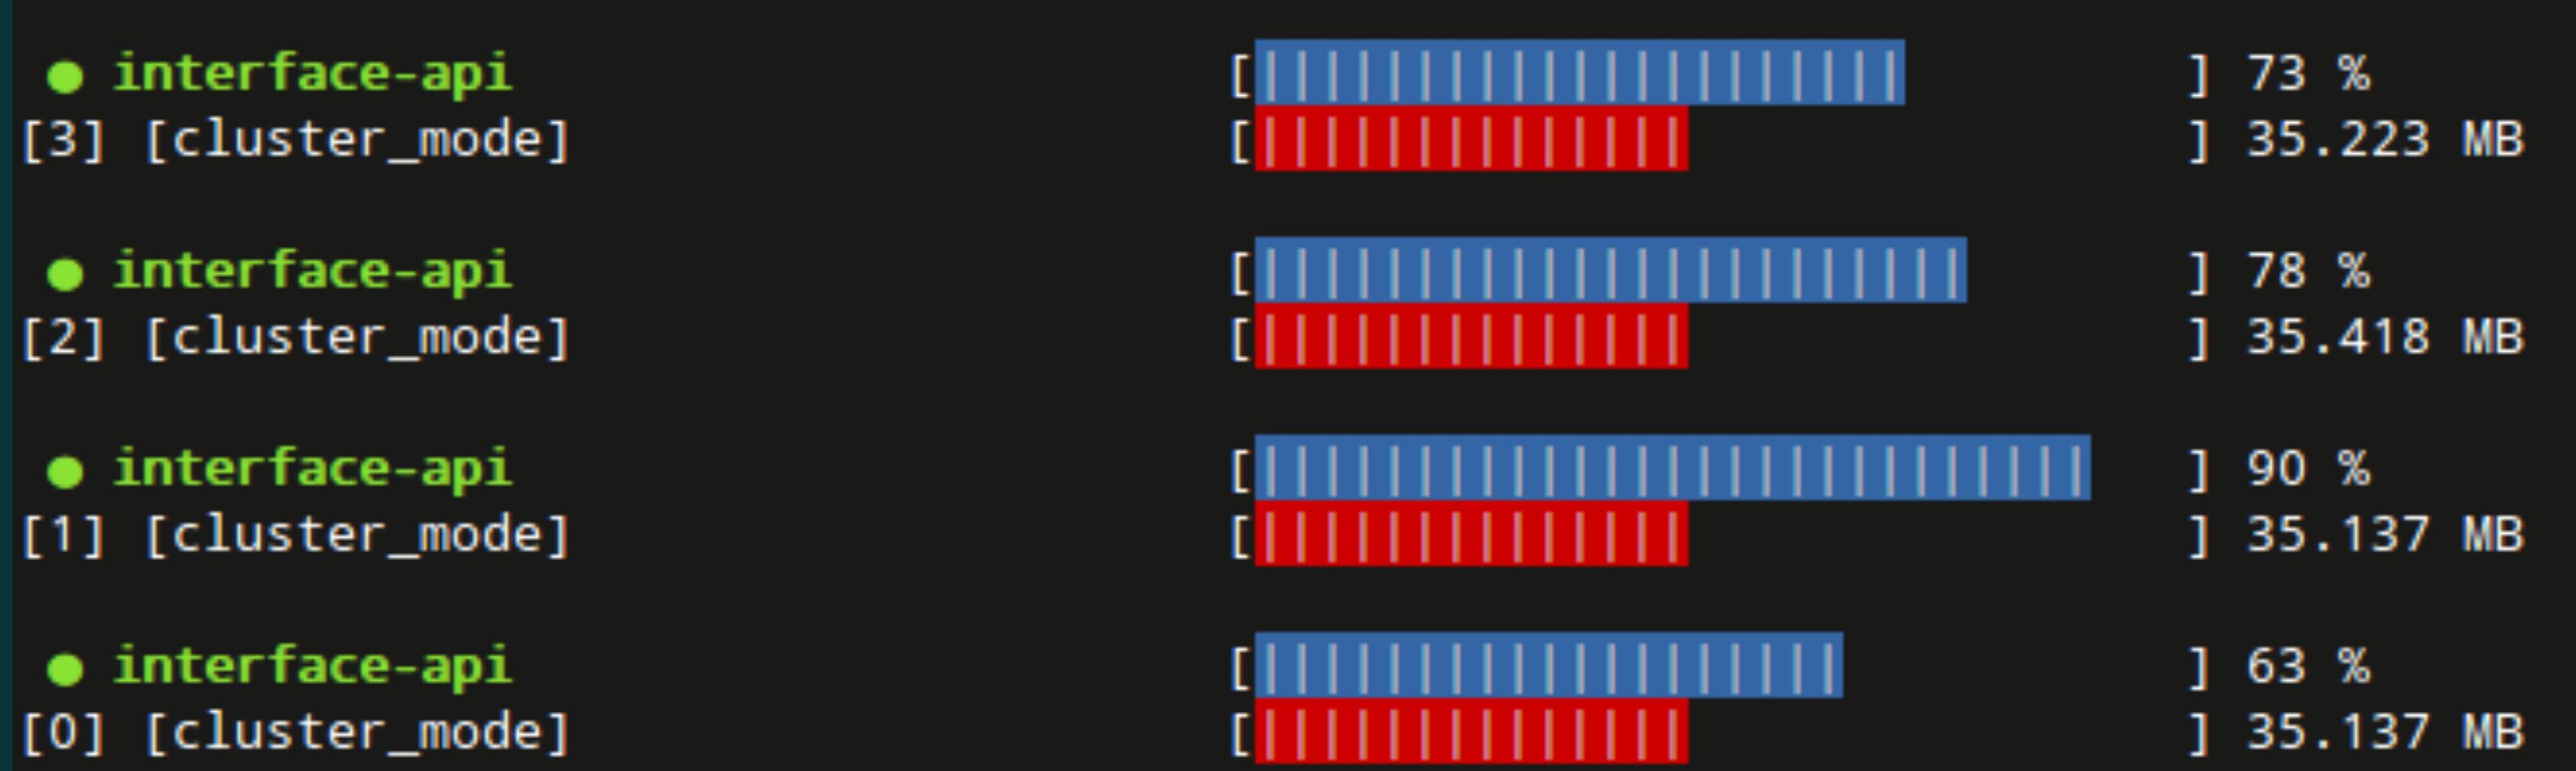

Start a Node.js app in cluster mode:

```
$ pm2 start app.js -i max
```

Starting an application cluster mode

```
$ pm2 start app.js -i <instances>
```

```
$ pm2 reload app
```

ecosystem.json

```
{  
  "apps": [ {  
    "name": "Application 1 - API",  
    "script": "api.js",  
    "exec_interpreter": "node",  
    "exec_mode": "cluster_mode",  
    "instances": 10,  
    "log_date_format": "YYYY-MM-DD HH:mm Z",  
    "max_memory_restart": "160",  
    "node_args": "--harmony",  
    "ignore_watch": [ "\\\\.*\\.(js|log)" ],  
    "watch": true,  
    "env": {  
      PORT: 3020  
    }  
  }, {  
    "name": "Application 2 - Worker",  
    "script": "worker.js",  
    "exec_mode": "fork_mode",  
    "log_date_format": "YYYY-MM-DD HH:mm Z"  
  }, {  
    "name": "Application 3 - Crawler",  
    "script": "crawler.js",  
    "exec_mode": "fork_mode",  
    "log_date_format": "YYYY-MM-DD HH:mm Z"  
  } ]  
}
```

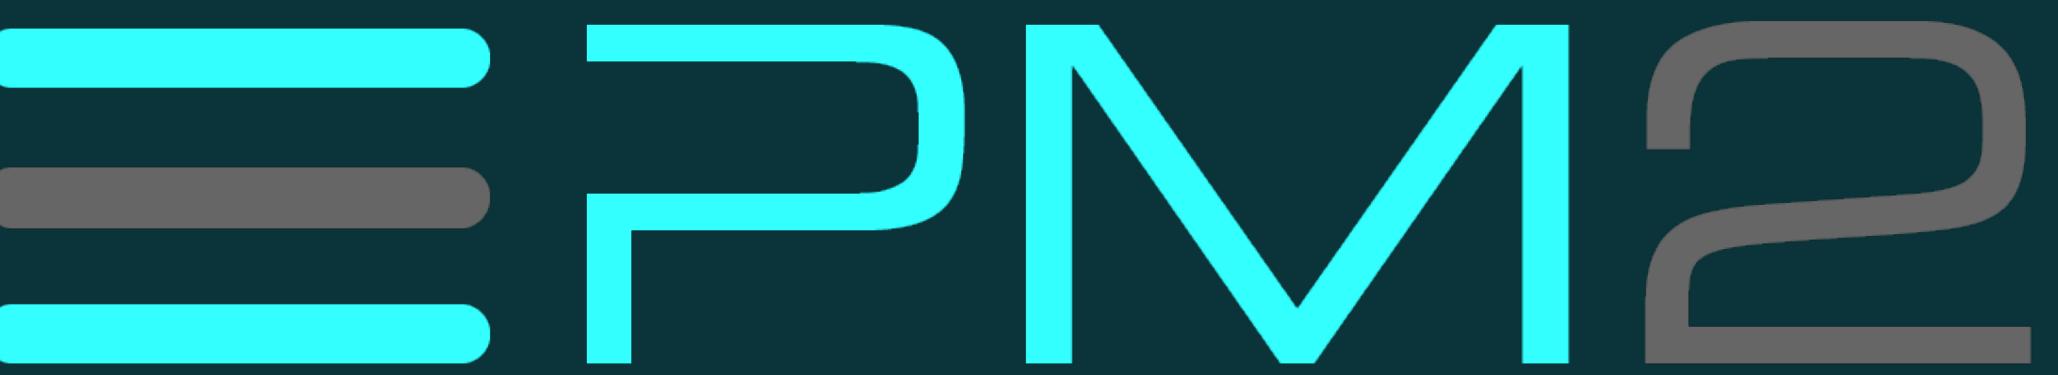

Application 1 (API)

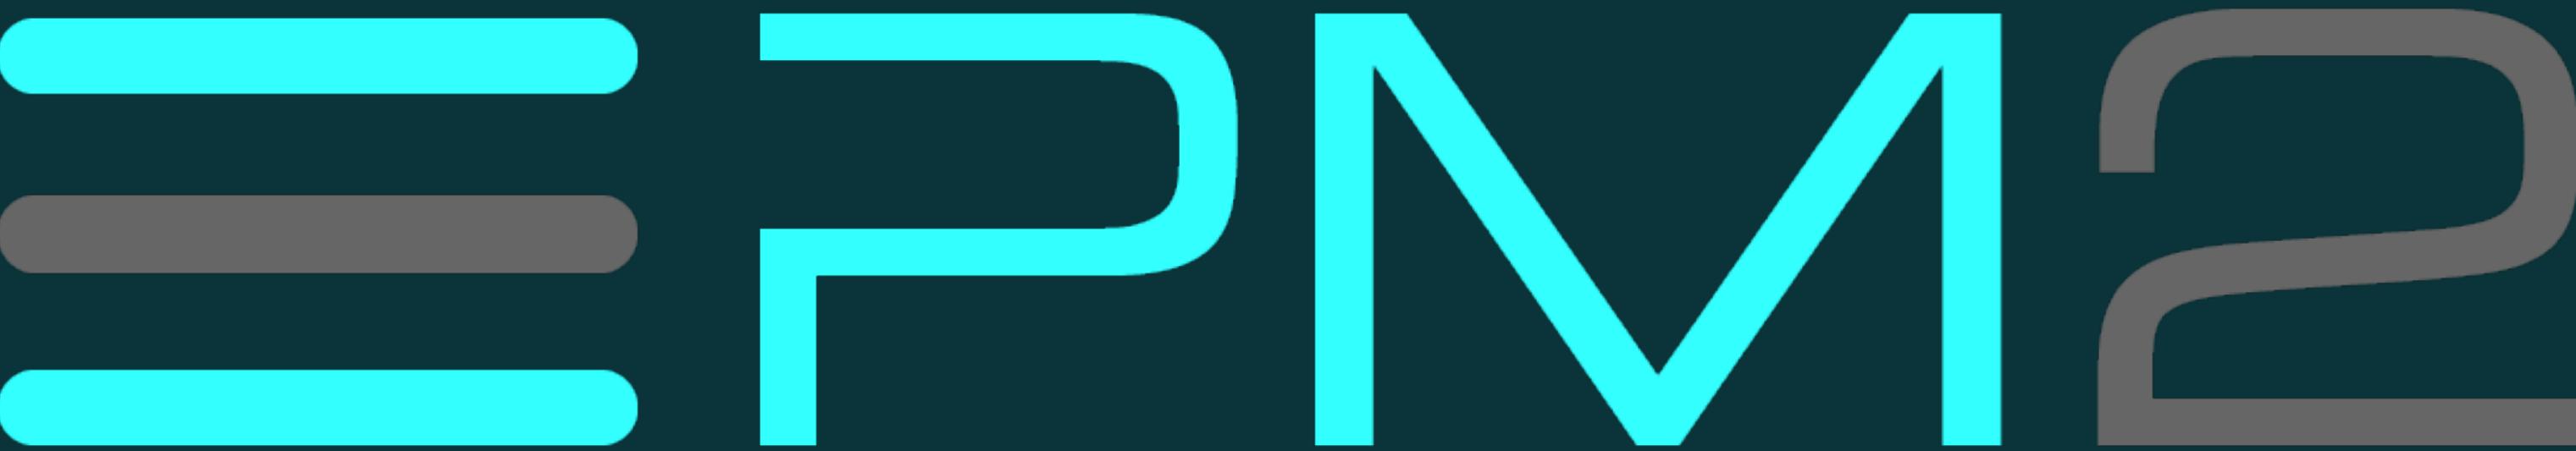

Application 2 (Worker)

Application 3 (Crawler)

PM2 V2 in mid September

- **4 months of testing**
- Optimized CPU/Memory usage
- Better integration with Docker
- PM2 API
- New logs commands (JSON/Formated)
- Windows Support

Official Website

<http://pm2.io>

Github

<http://github.com/Unitech/pm2>

Micro services, Serverless and Networked Process Manager

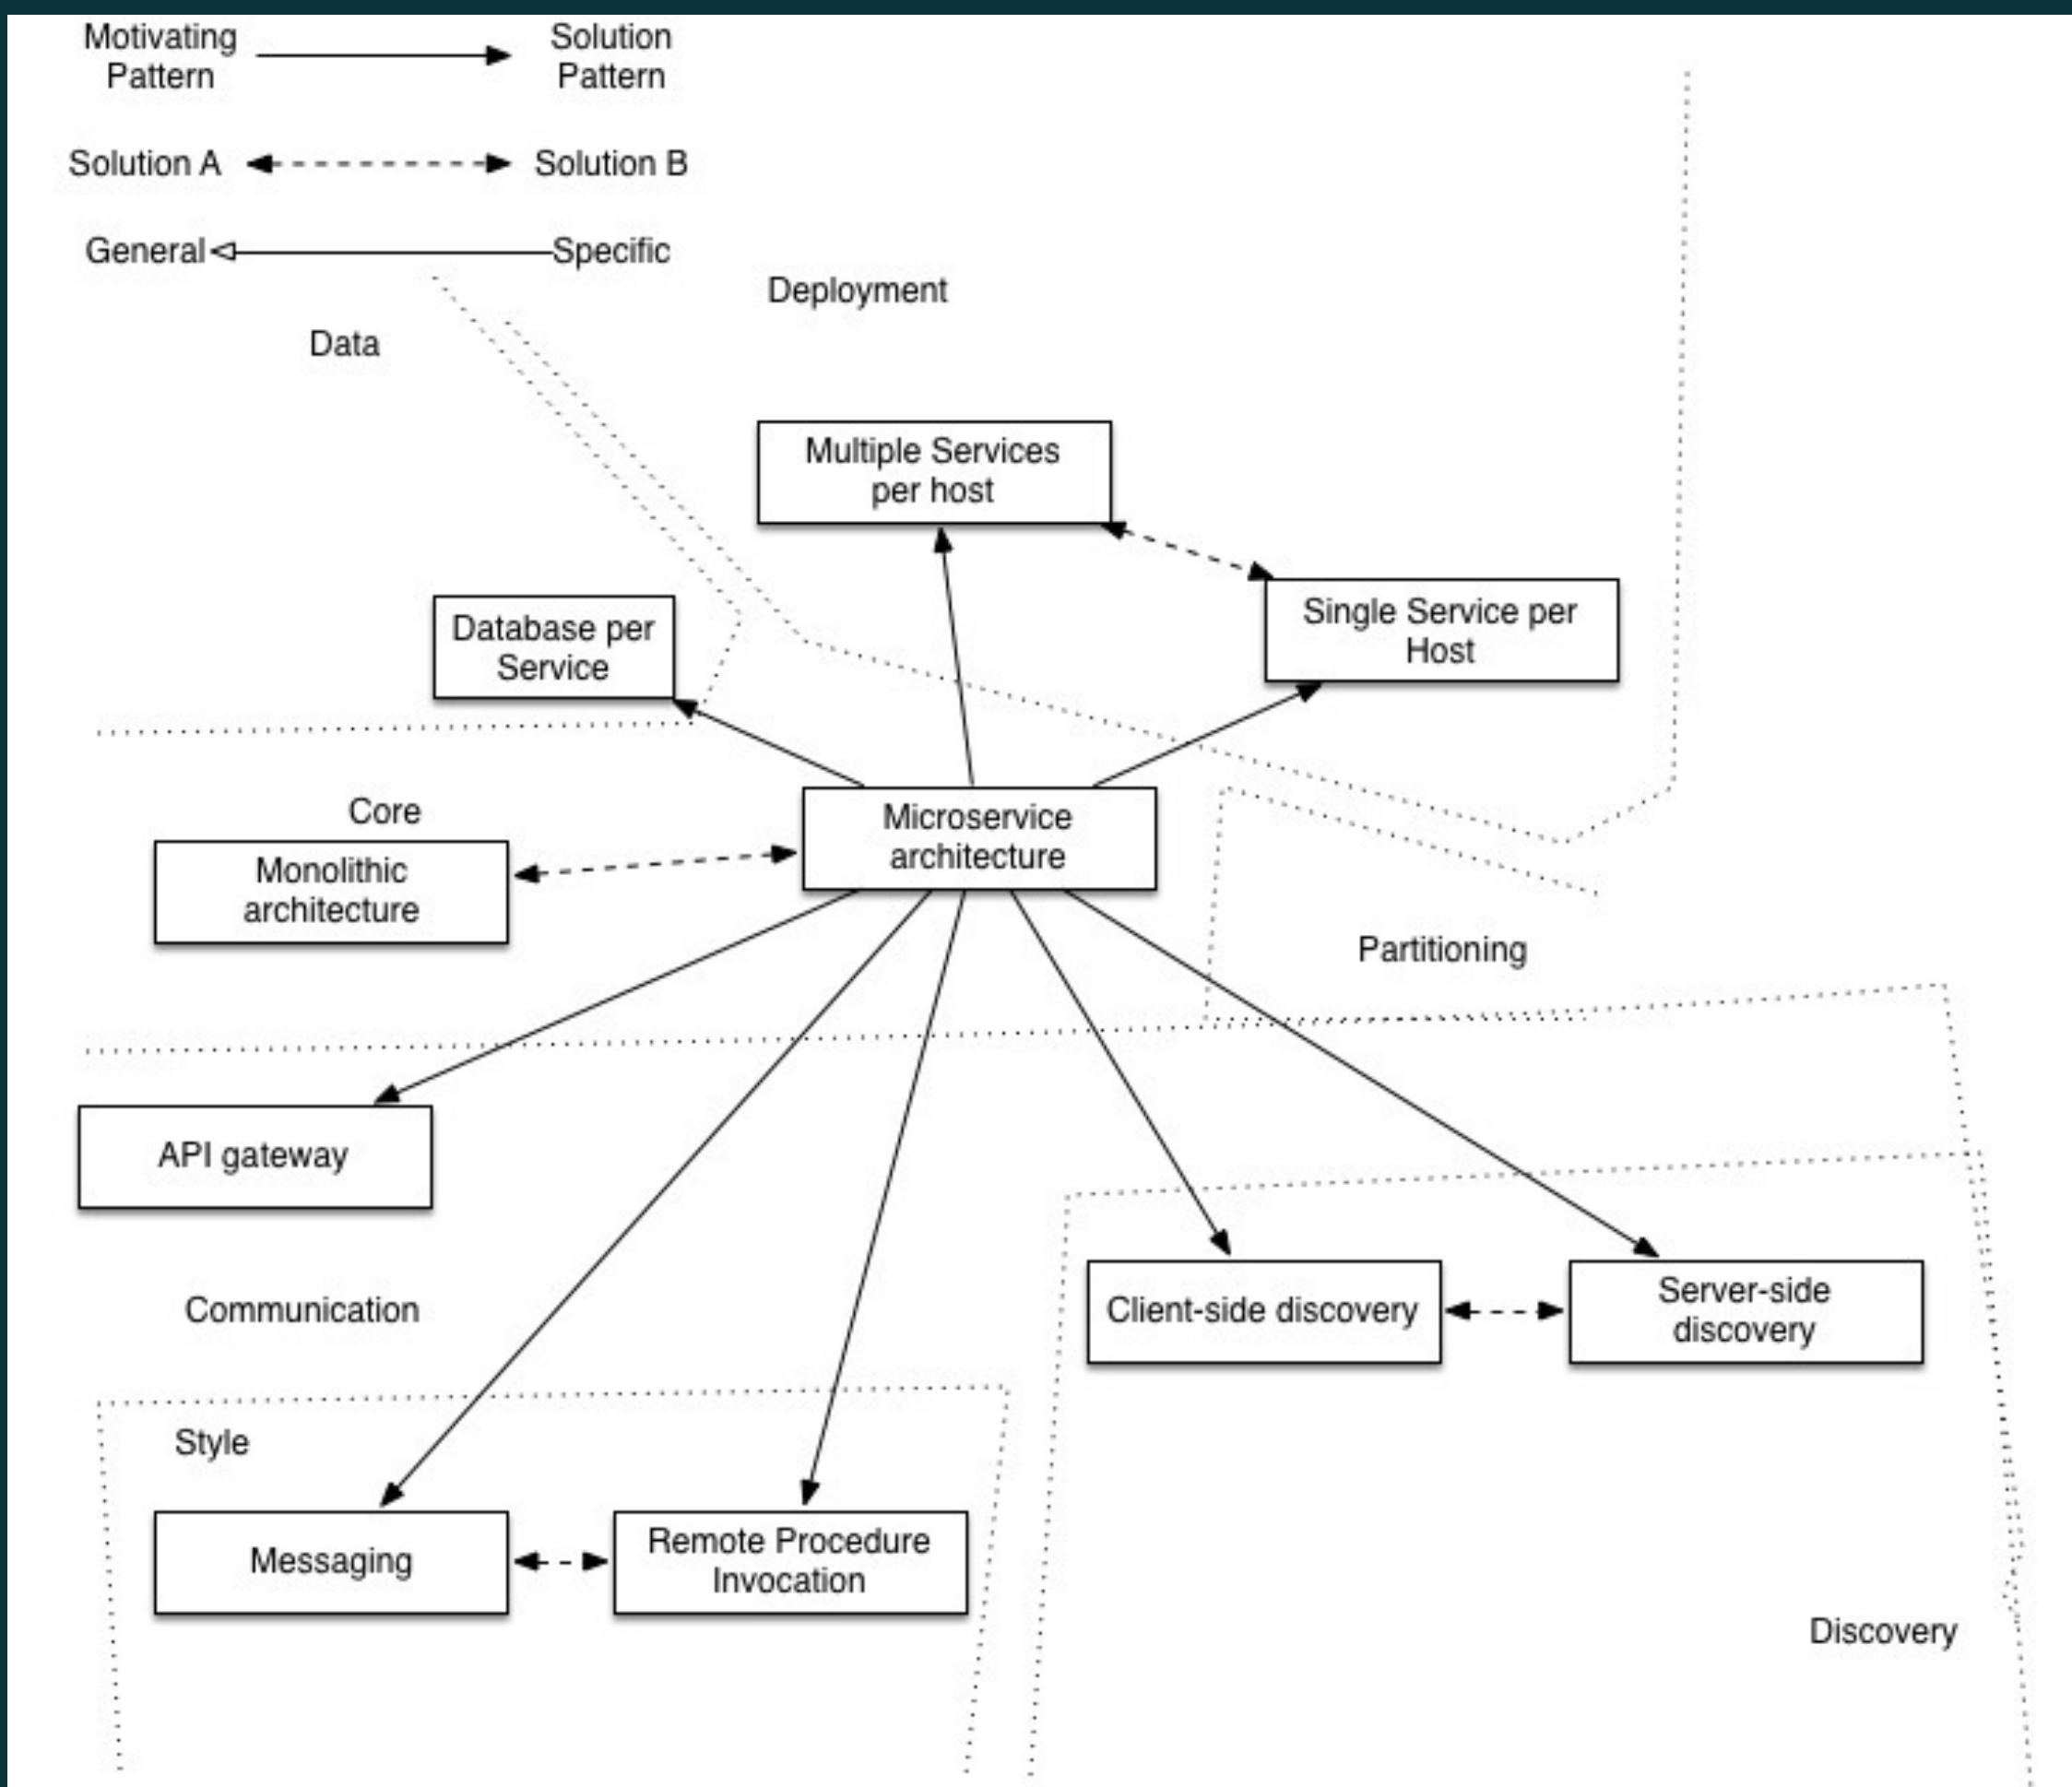

Theory

MicroService is HOT

- **Breaking Monolith into**
 - **Small, Independent, loosely coupled modules**
- **Better maintainability, monitoring and scalability**
- **Polyglot / Multi Language System**

MicroService is HARD

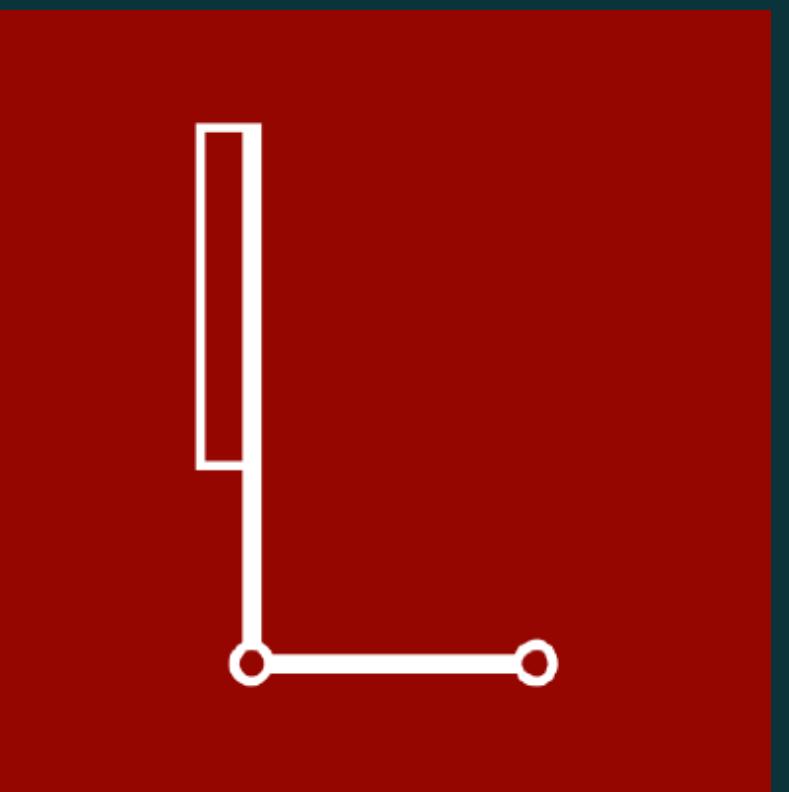

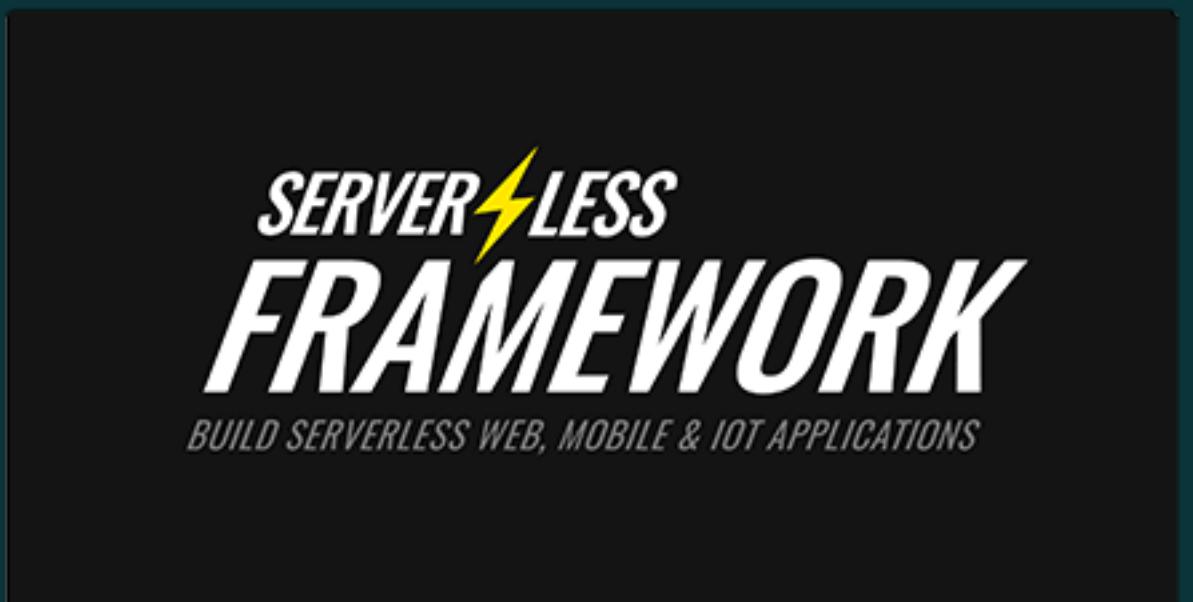

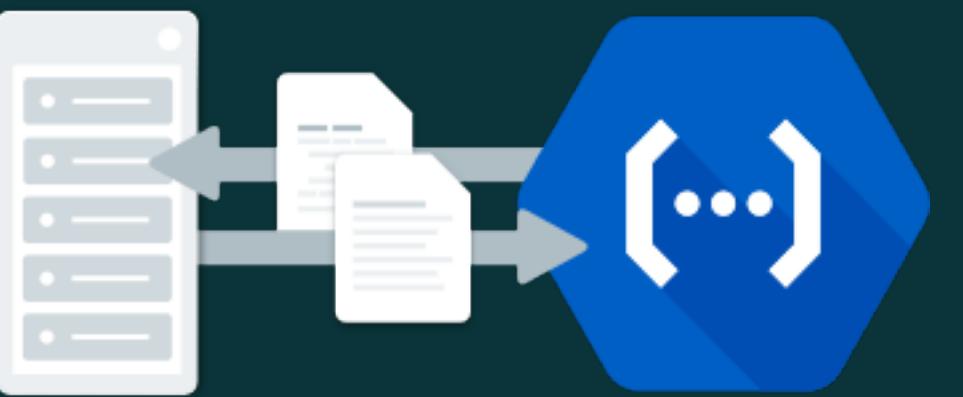

- Too many choices to do
- Difficulties for OSS framework to get attraction
- Lack of best-practices
- Deployment is complex

MicroService is Disperse

- **Open Source Attempts**

- LeverOS
- Seneca
- Effe
- Klyng...

- **Commercial**

- Amazon AWS Lambda
- Google Cloud Functions
- Microsoft Azure Functions

SENECA

Not any OSS solutions get
Adoption...

Infrastructure Provisioning, Management and Monitoring
is the black whole on these systems

Commercial Solutions get Adoption

Commercial Solve the Problem of Infrastructure
management

The case of Amazon Lambda: API

Expose a task in the "cloud":

```
exports.myHandler = (event, context, cb) => {
  // Use cb() and return information to the caller
};
```

Execute the task from your script:

```
lambda.invoke(params, function(err, data) {
  // Invoke the function
});
```

Where is the Ruby on Rails of MicroService?

Open Source, Conventions over Configuration,
Ease of Use, Human Friendly

Here is my Tentative

Making Process Managers
connected together

Process Manager

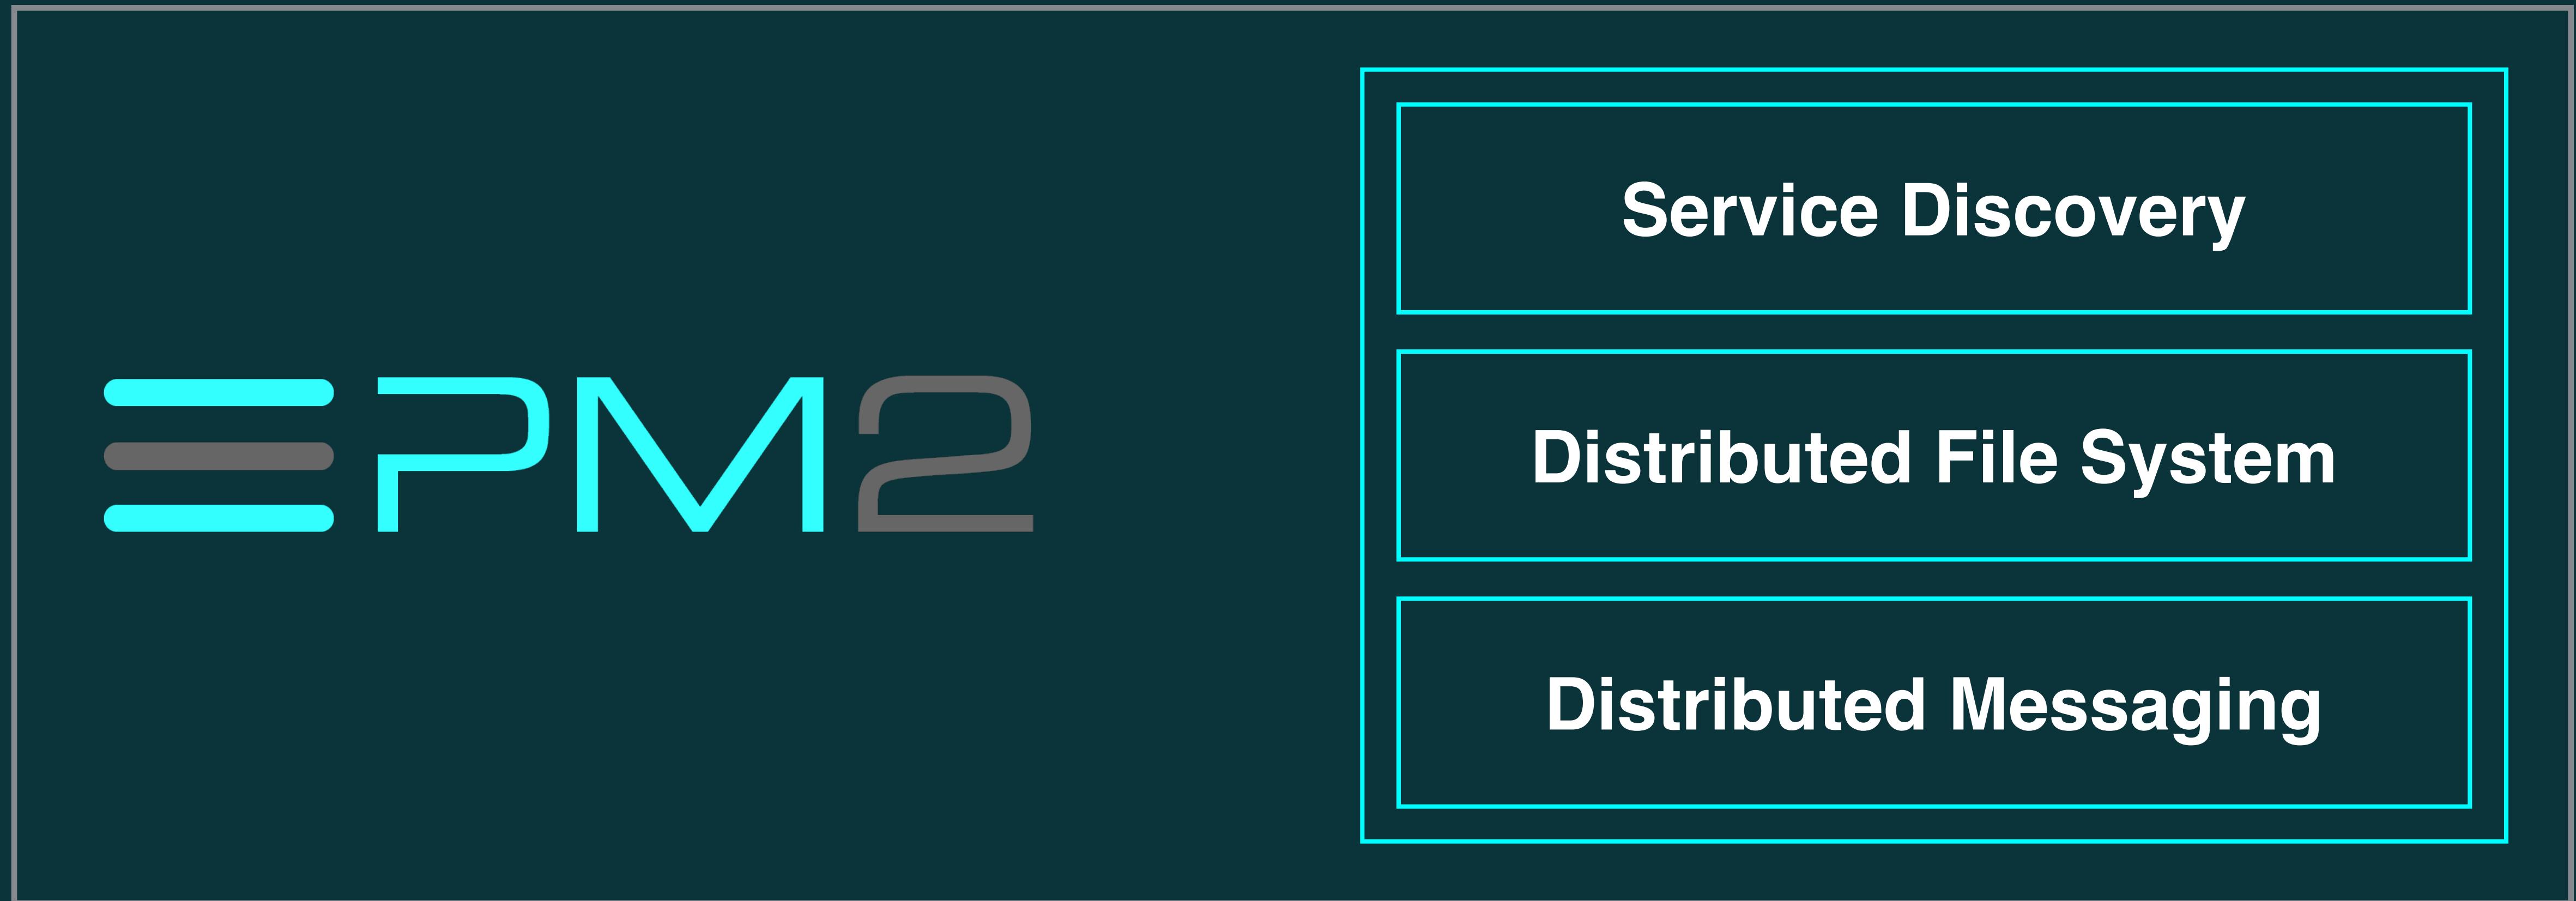

Process Manager

Networked Process Manager

Process Manager

Network Layer

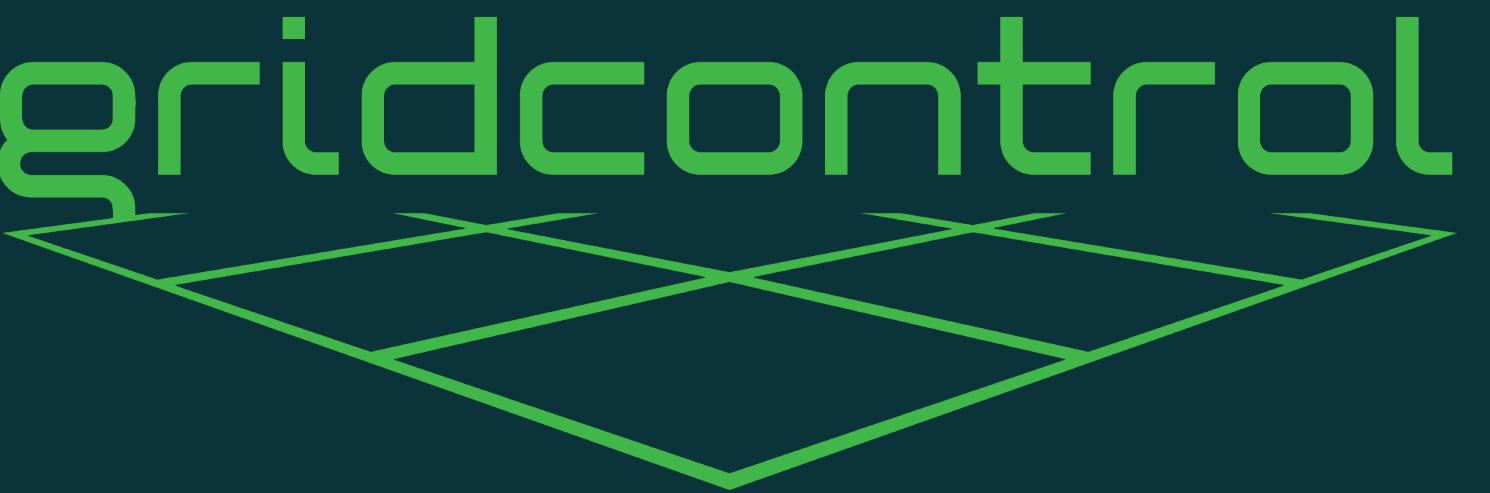

gridcontrol

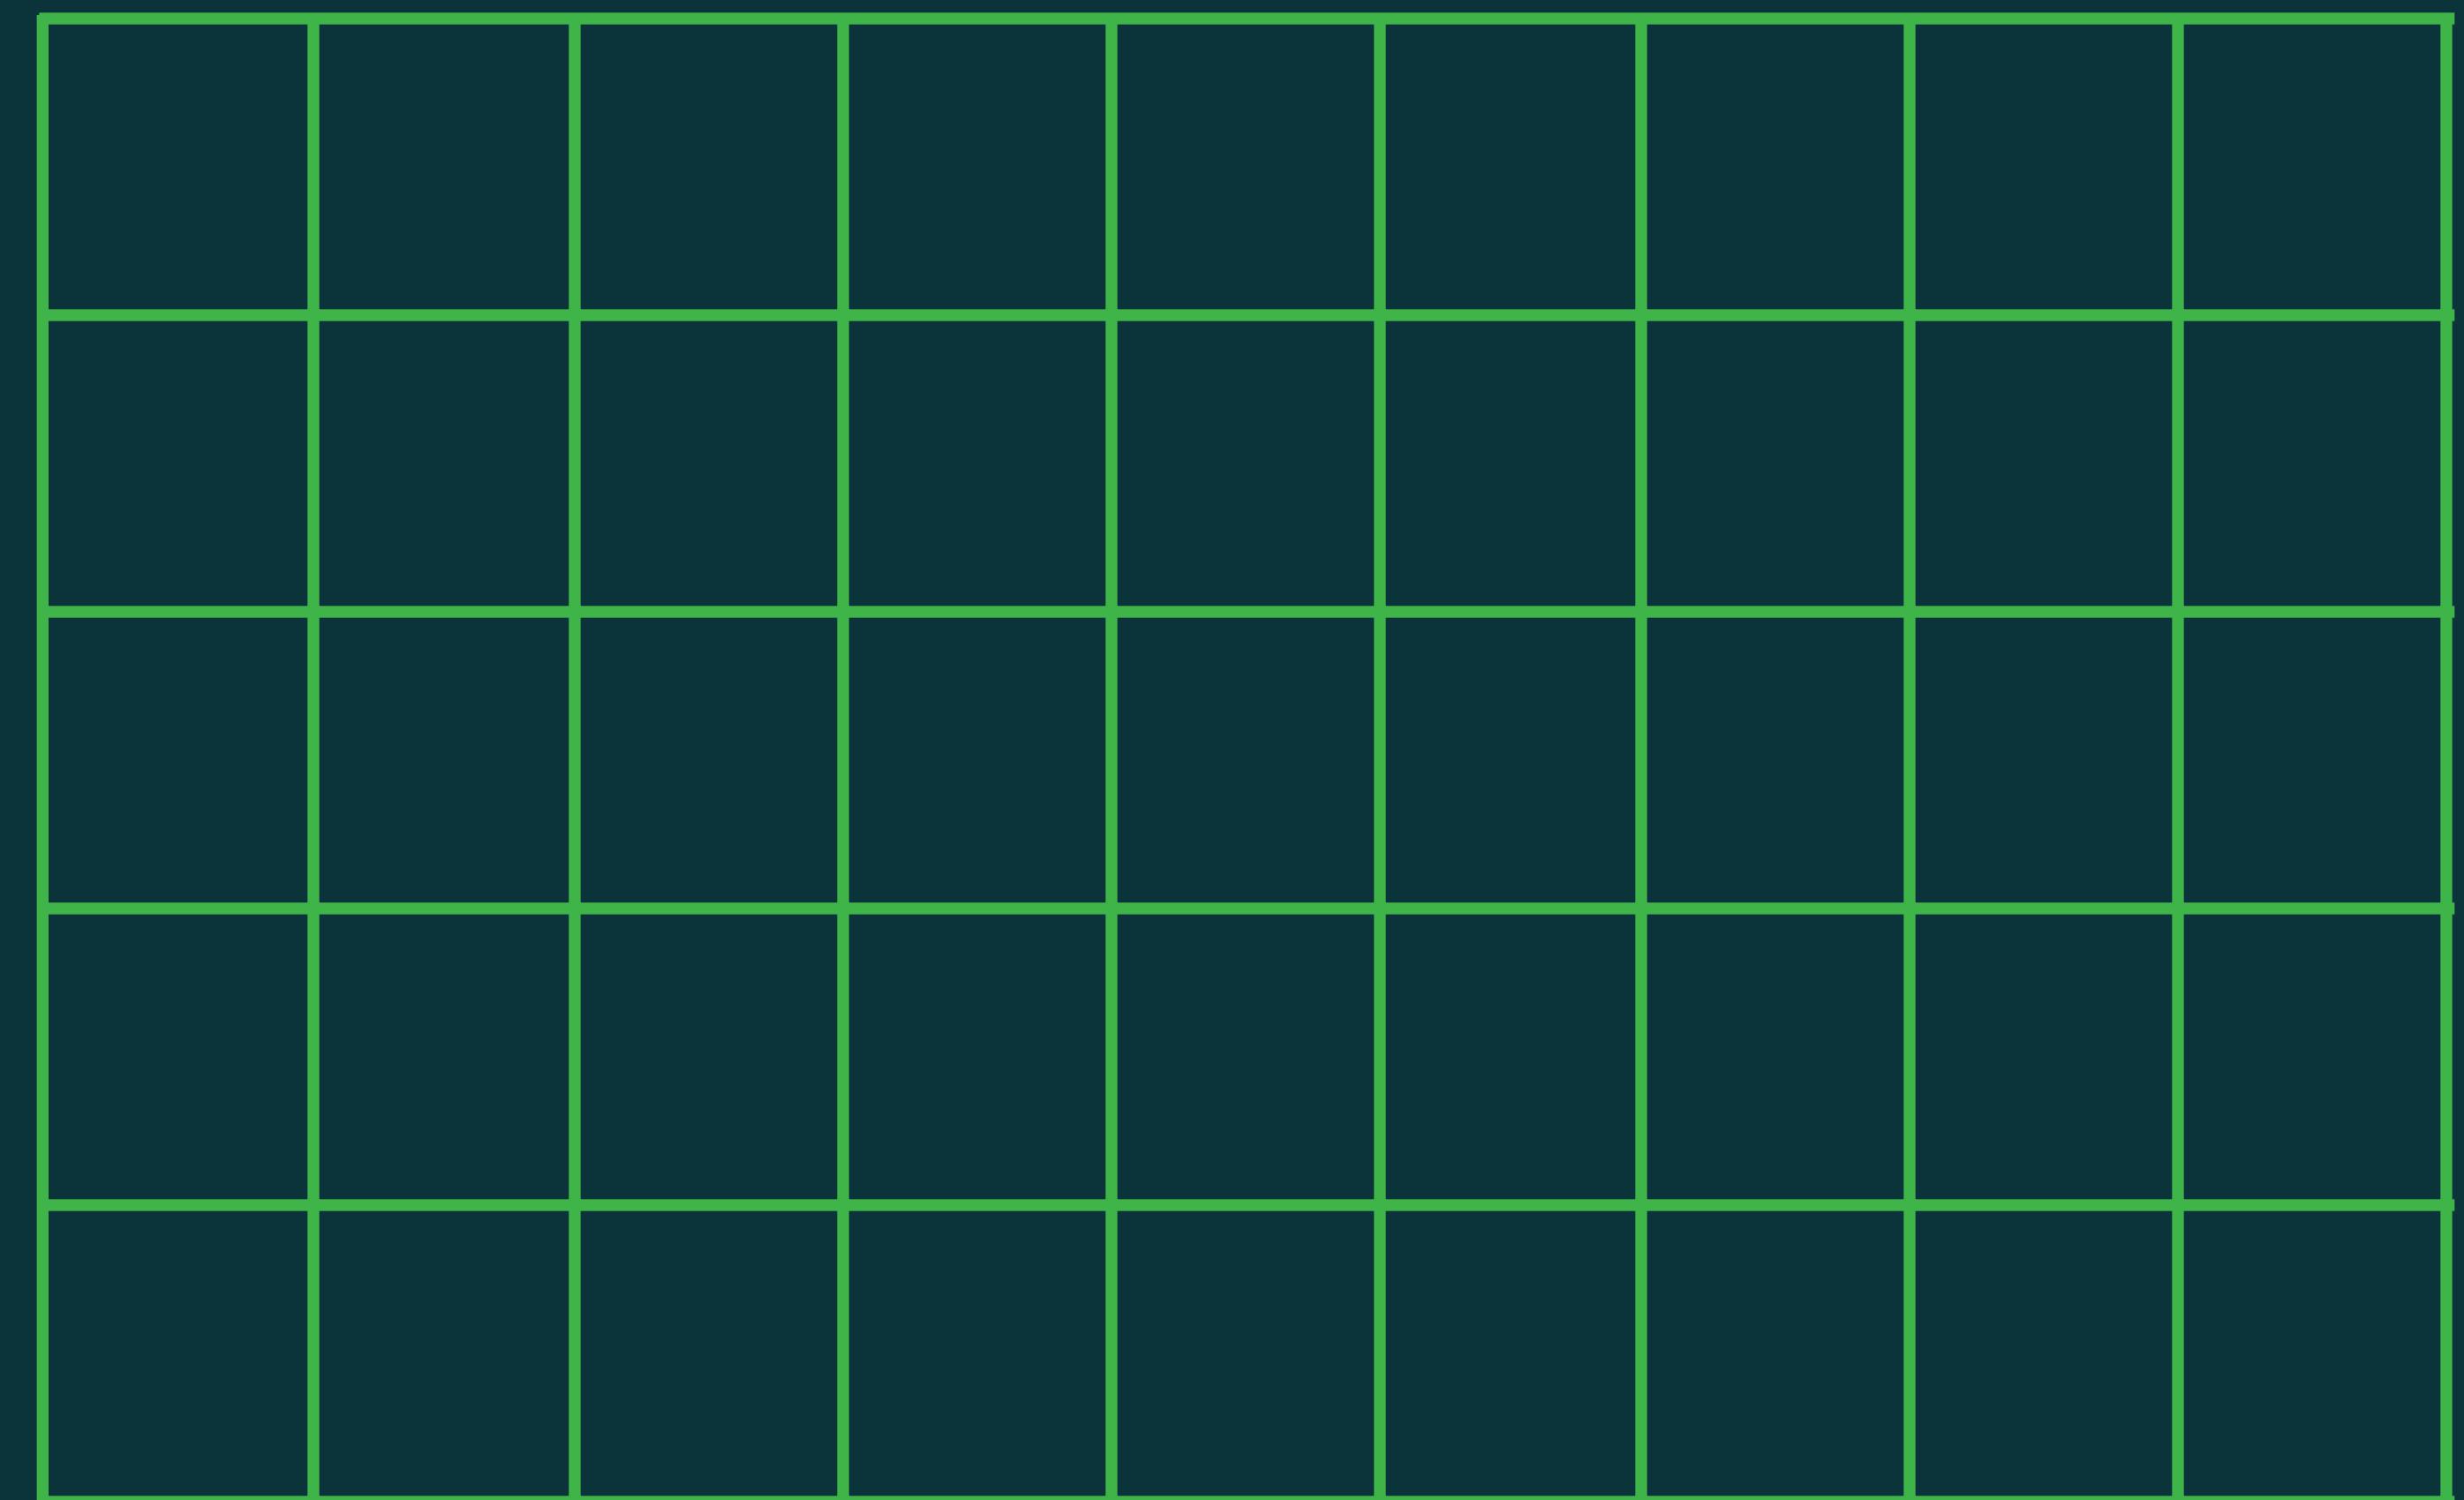

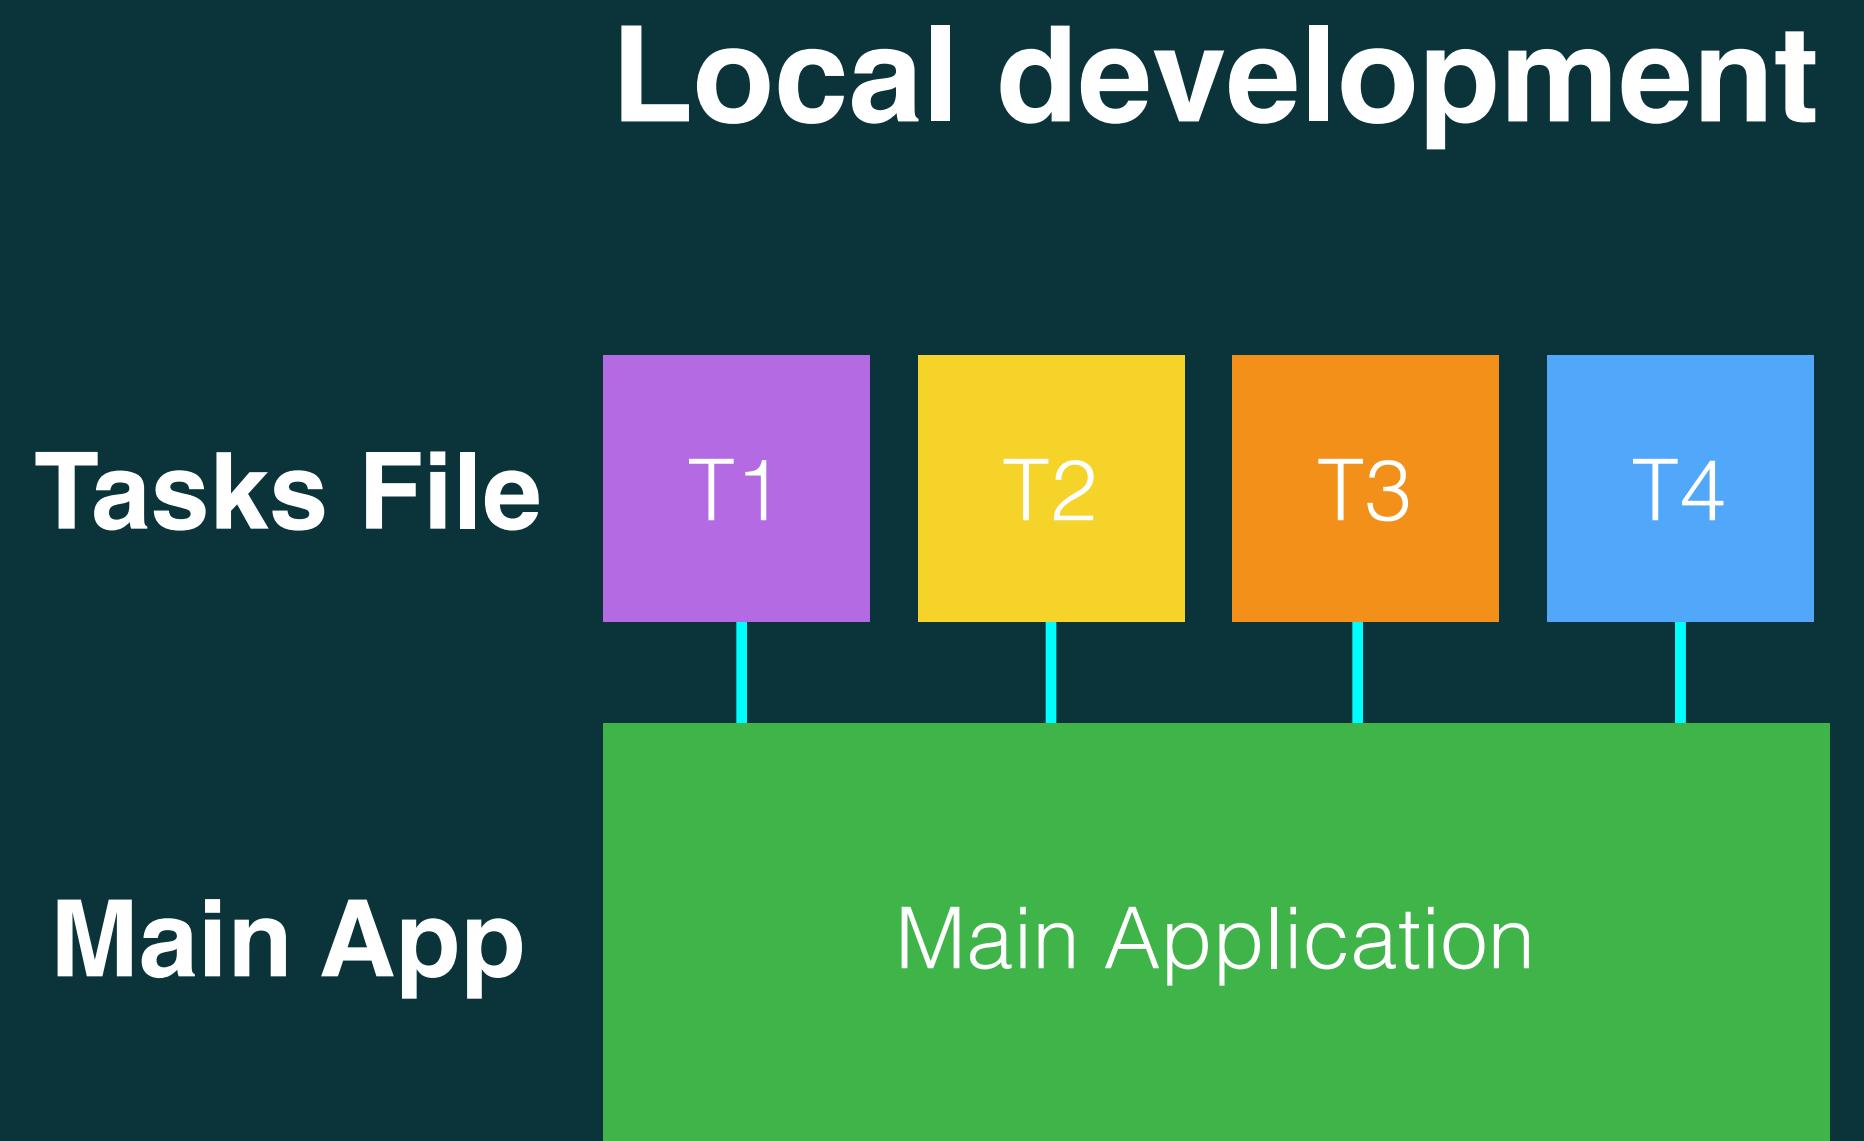

Decentralized Grid System

that **Provision** and **Link Server** to create a Compute Grid,
Replicate Task Files across all servers
And Allow you to **Execute Tasks Remotely**

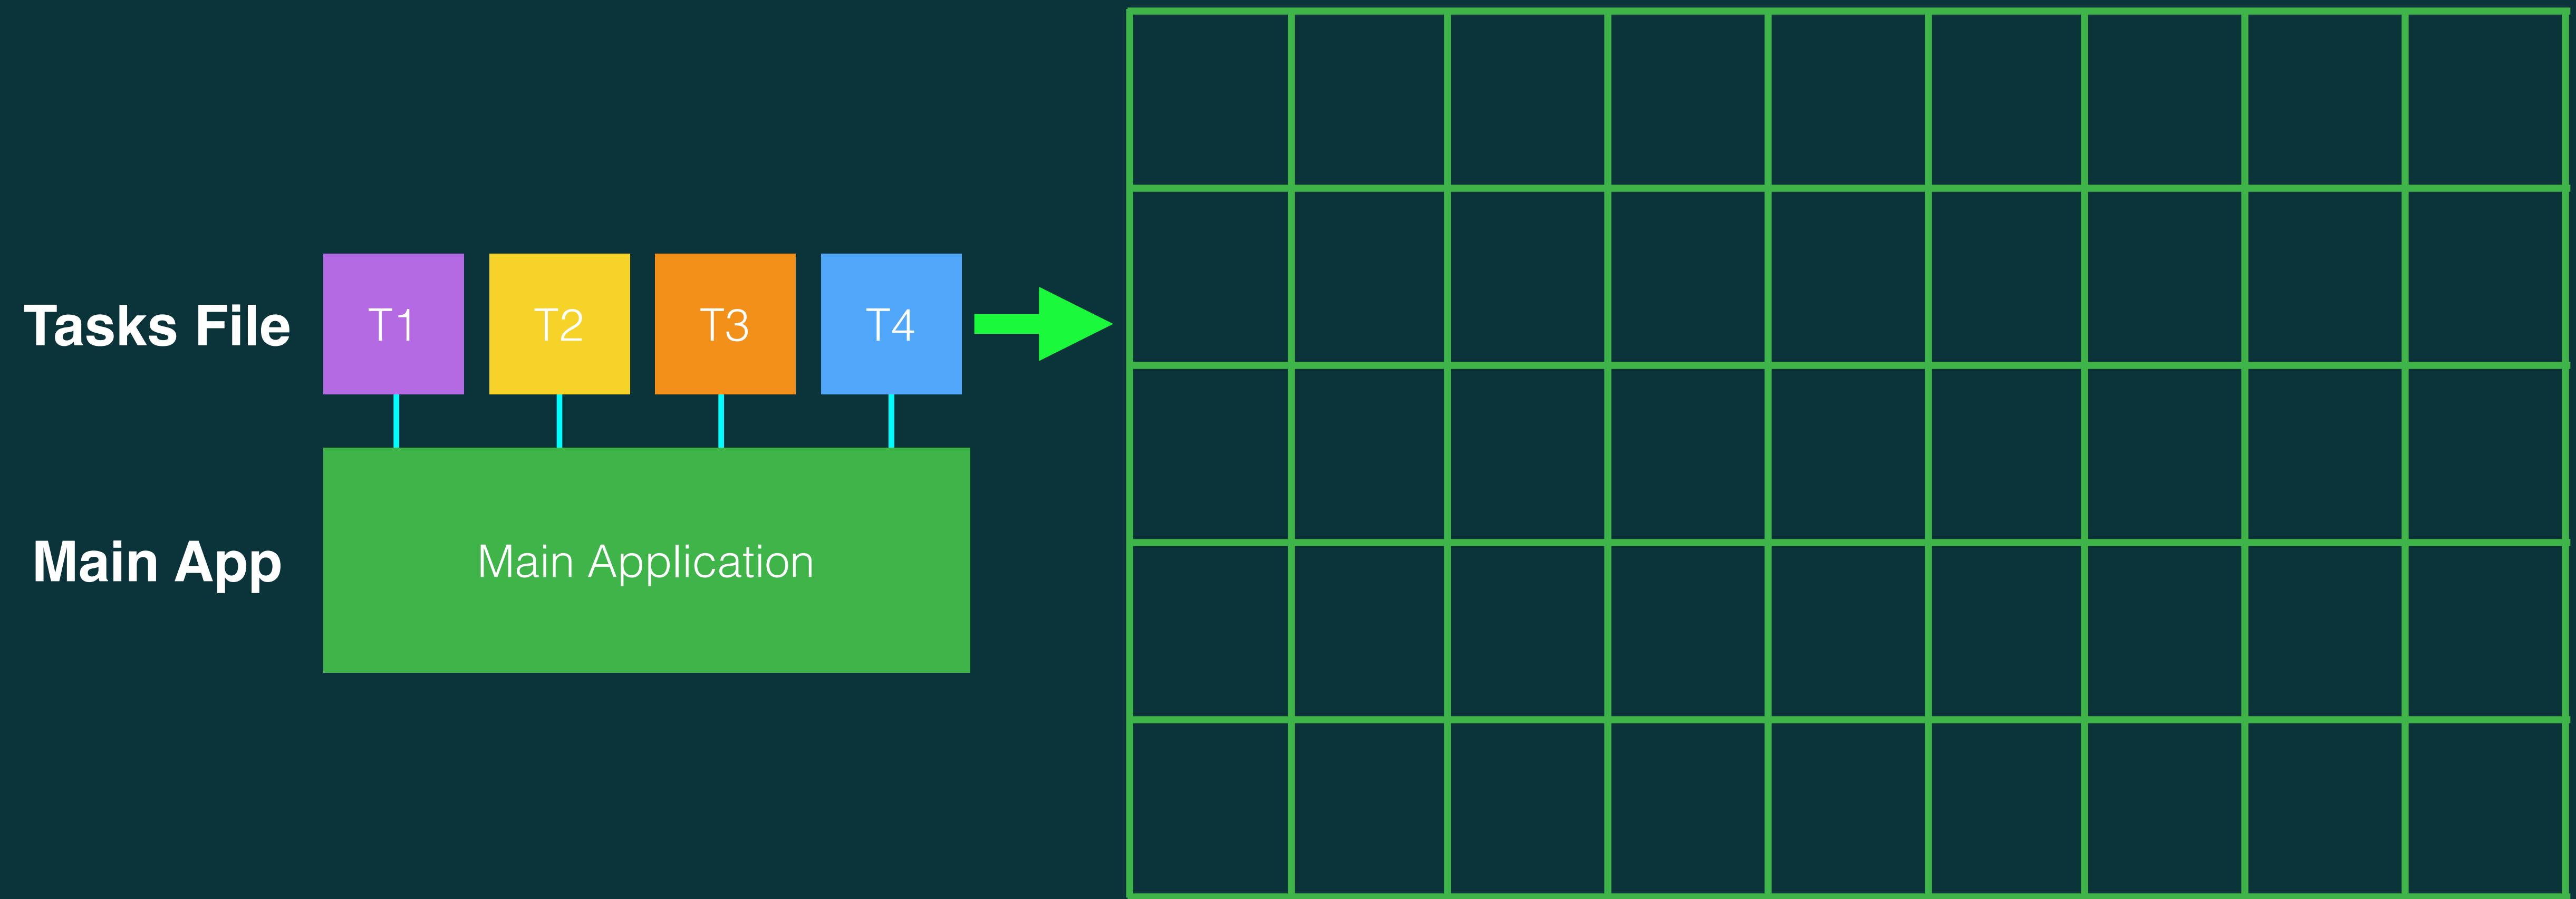

Compute Grid

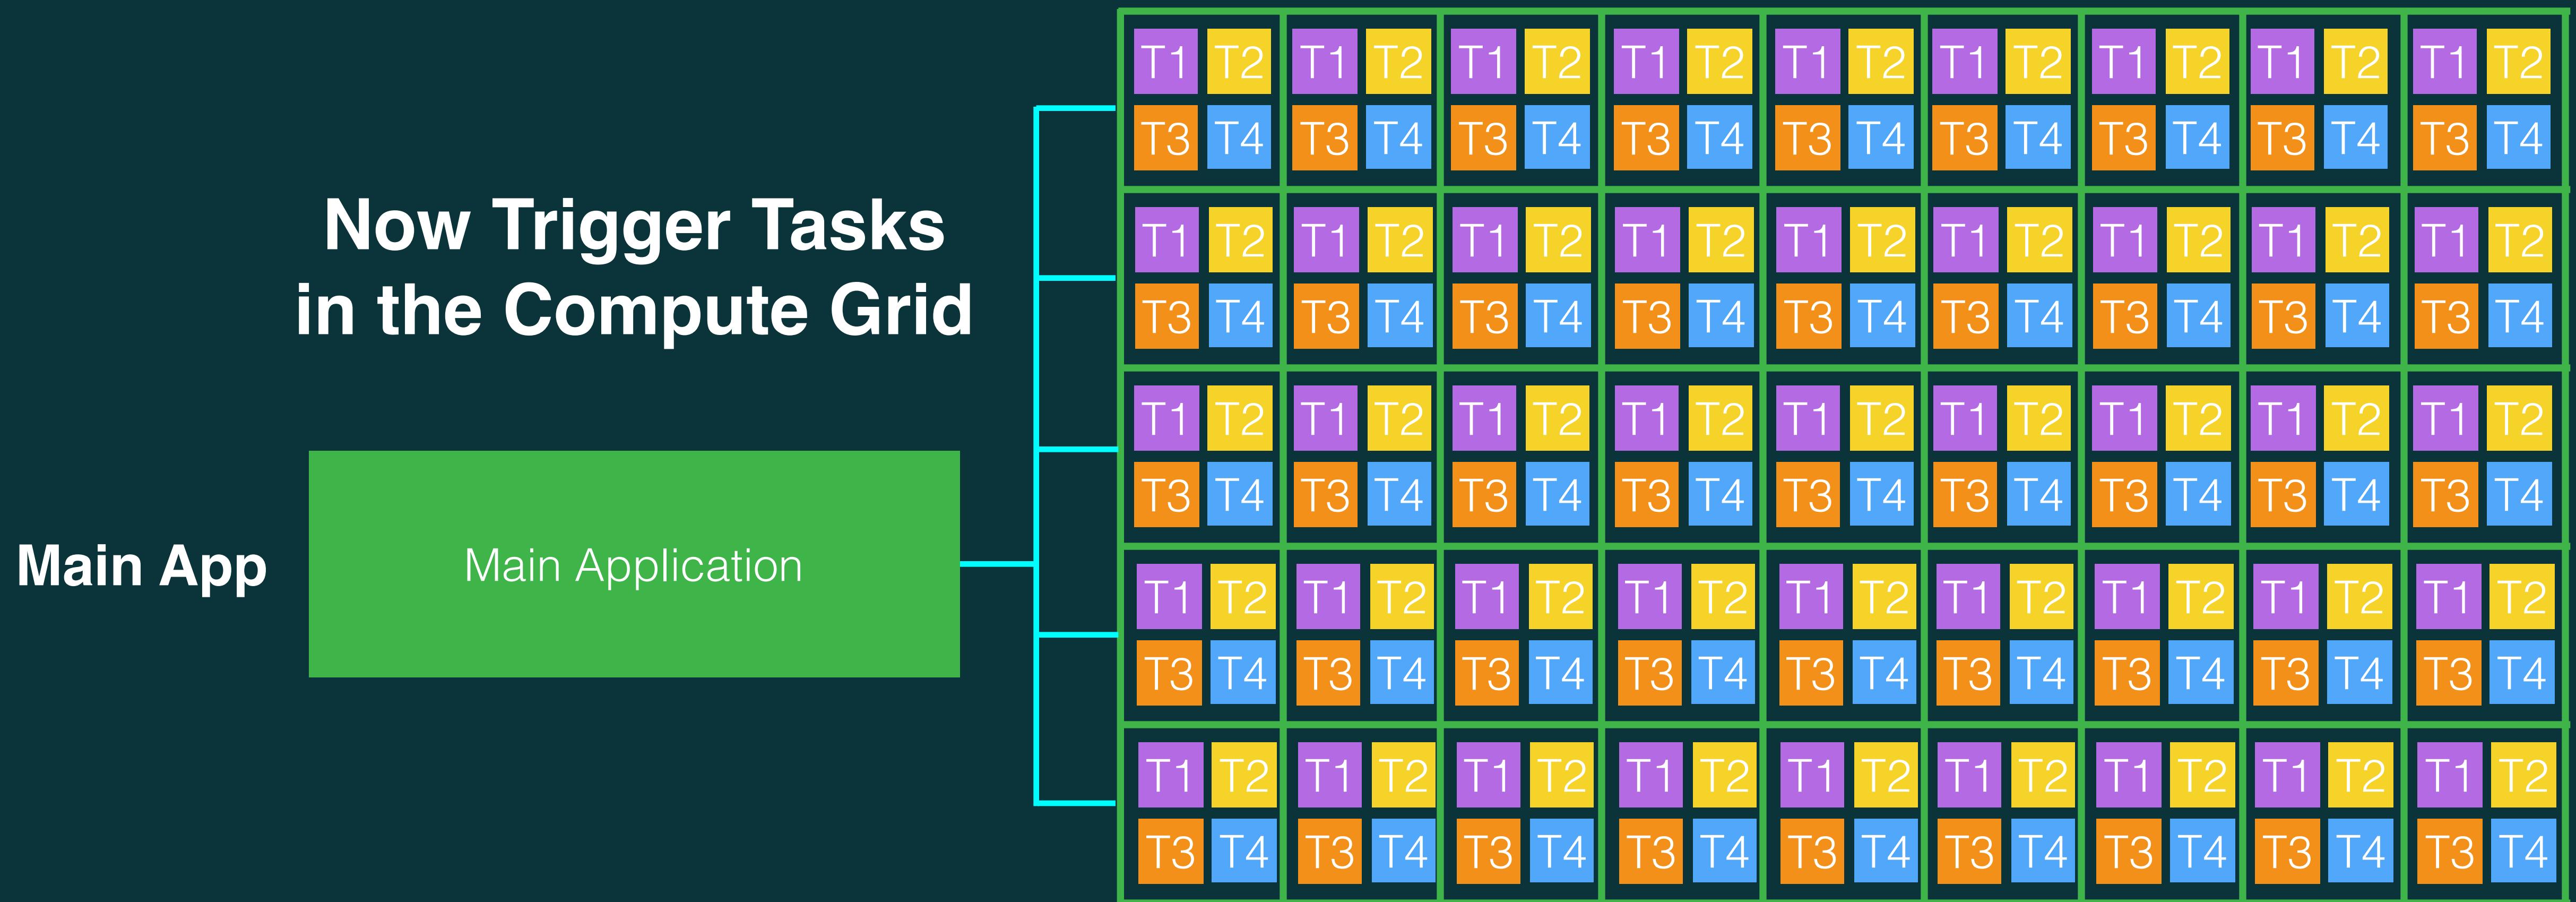

Deploy Local Tasks to the Grid

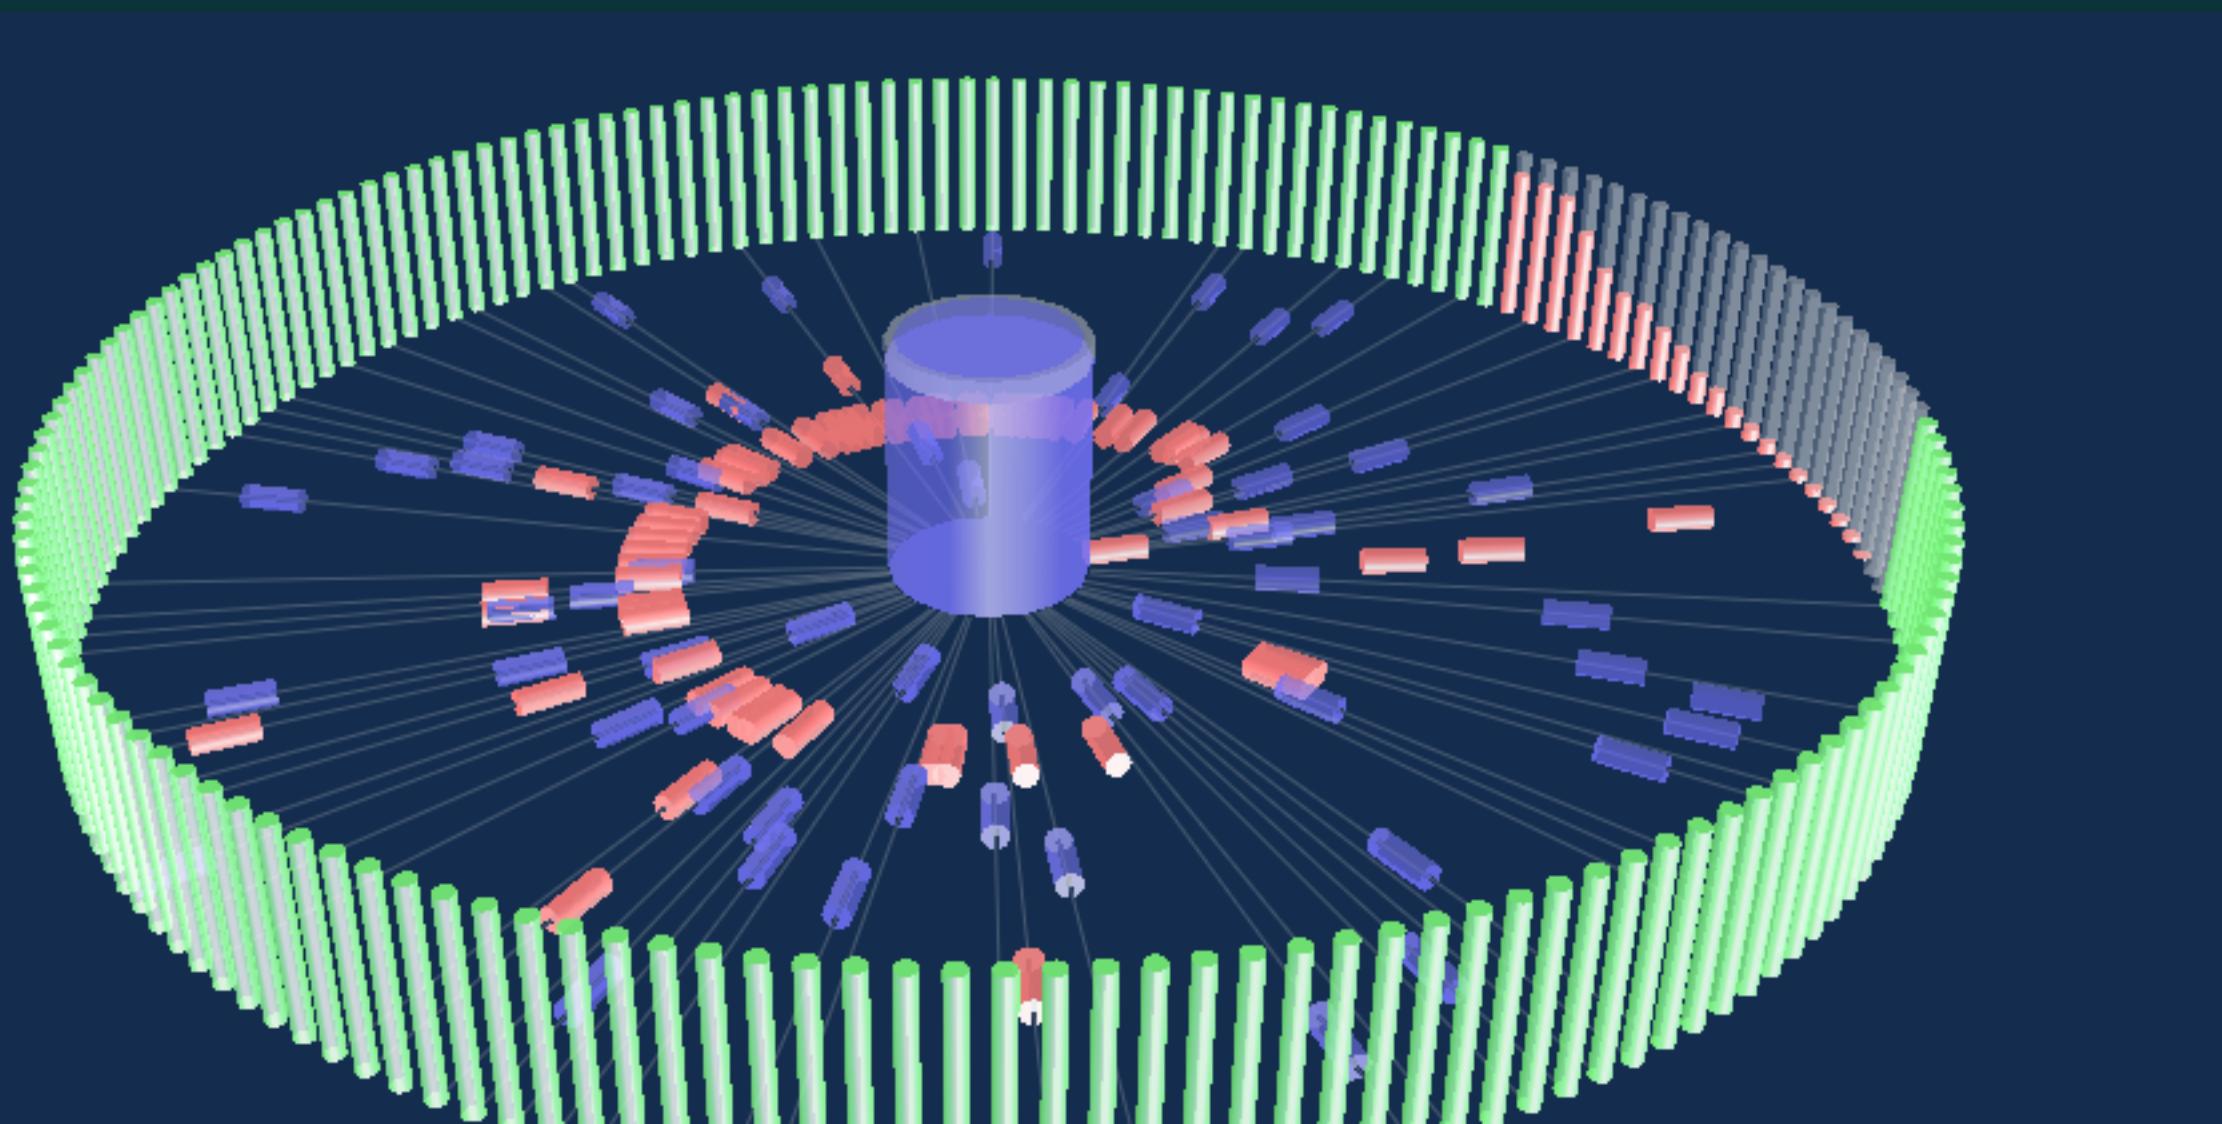

Tasks Executed on Grid

Gridcontrol: Under the Hood

Service Discovery & Interconnectivity

- Multi DNS resolution + DHT
- Wide Area Discovery (across subnet)

Service Discovery

Distributed File System

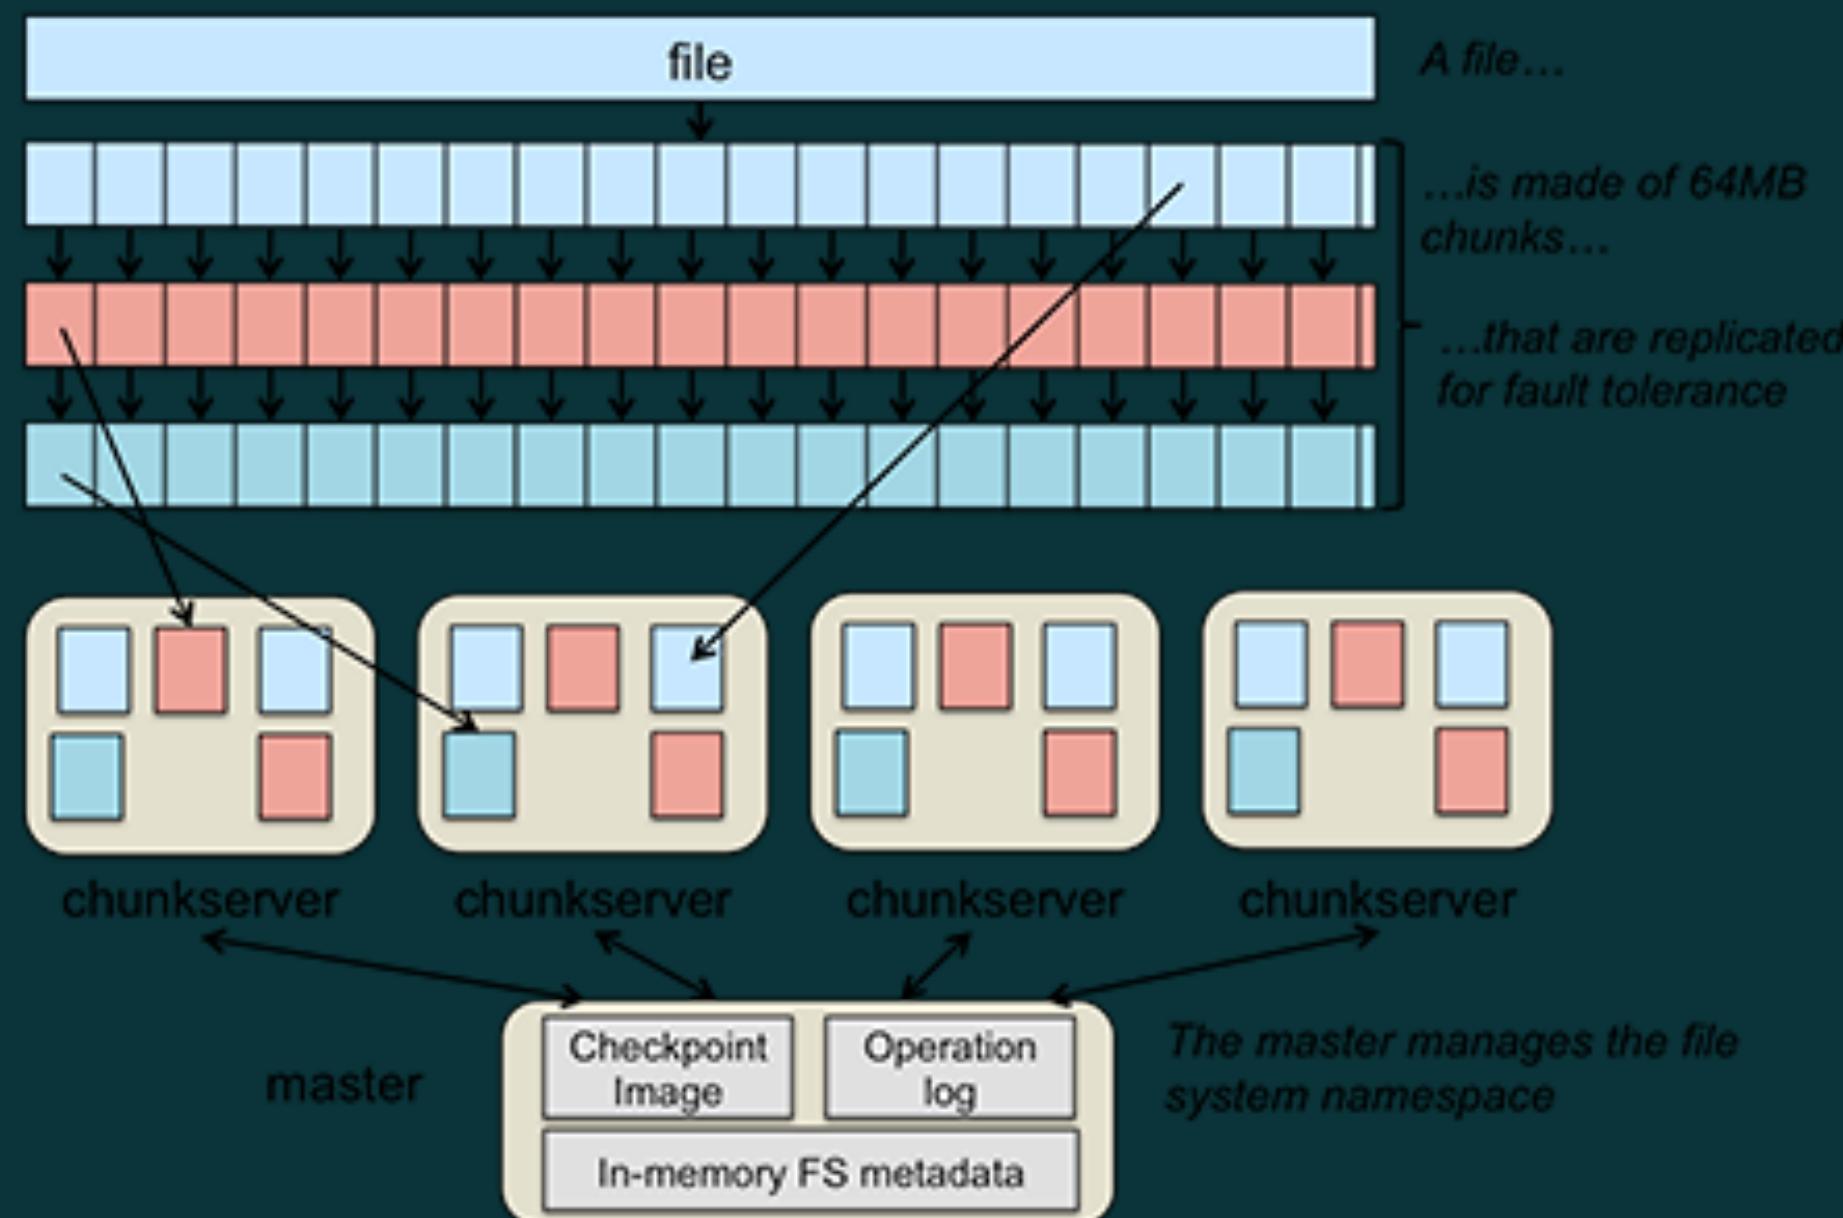

Distributed Messaging

Decentralized!

Gridcontrol: Under the Hood

Networked File System

- Peer to Peer file Exchange
- Rabin File Chunking and Merkle Tree

Service Discovery

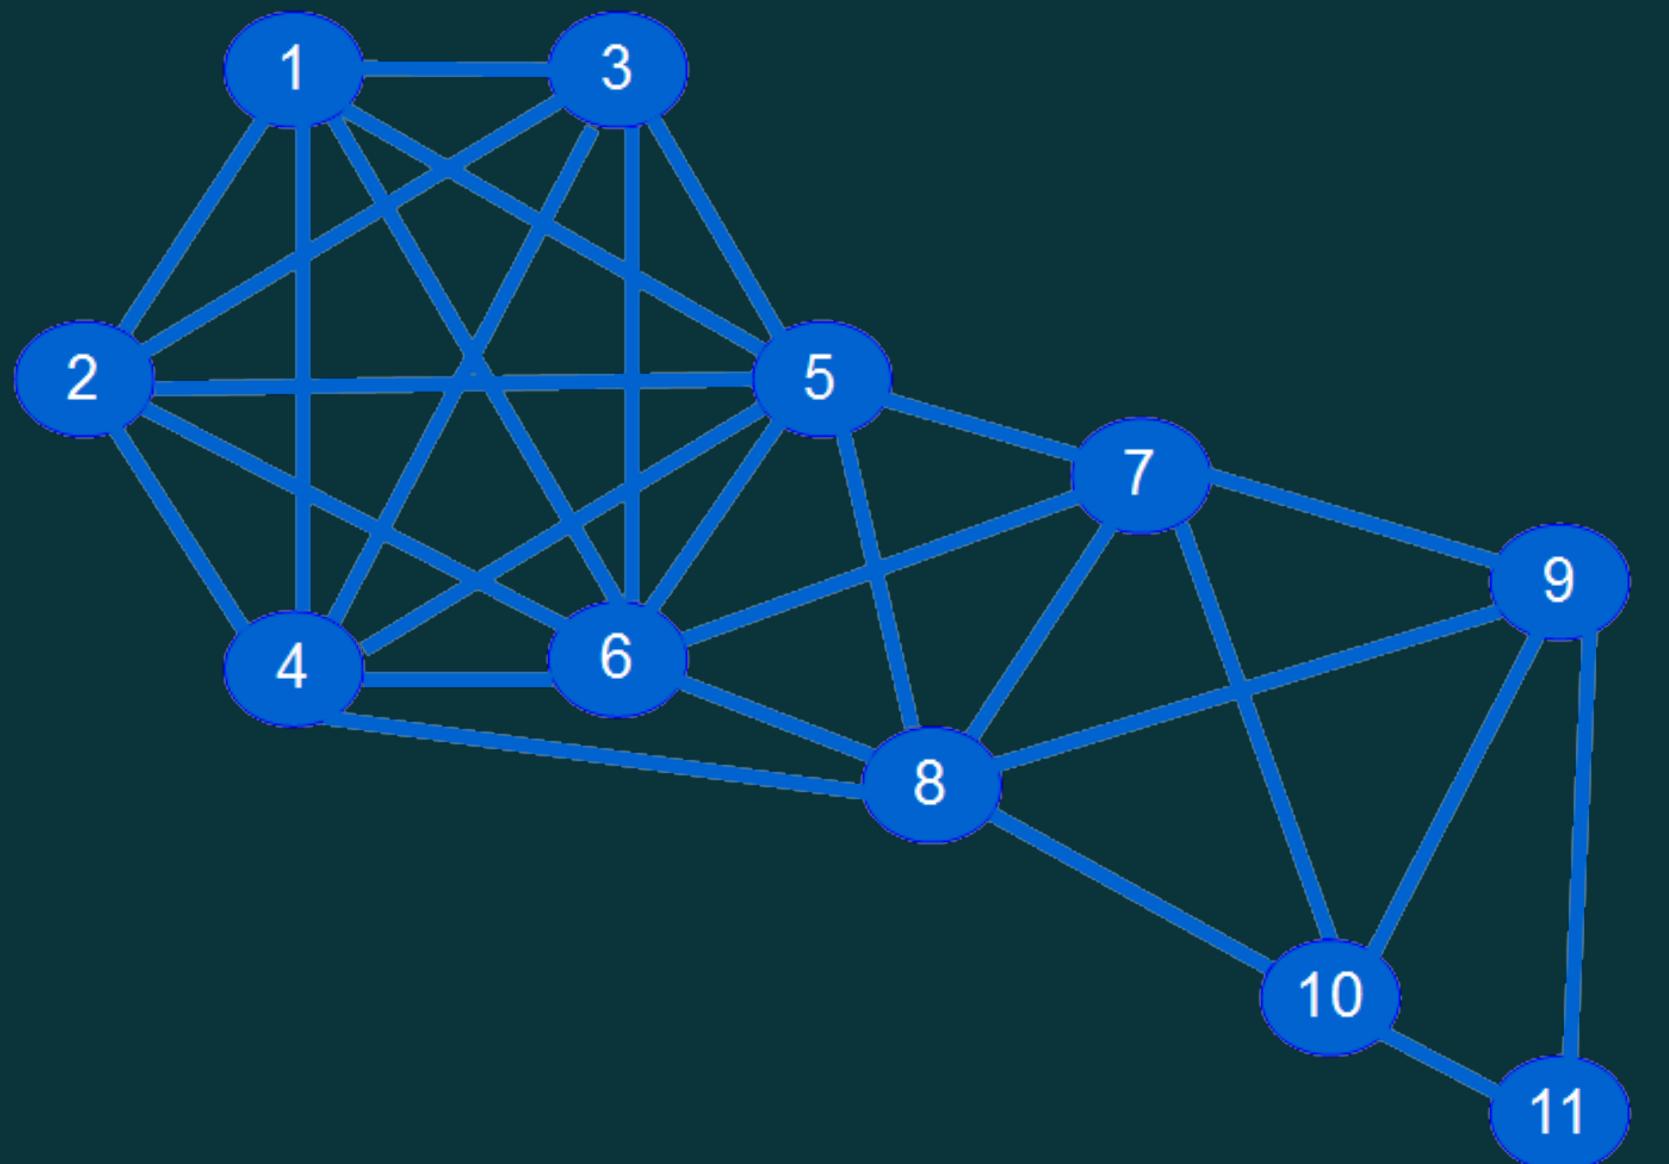

Networked File System

Distributed Messaging

Gridcontrol: Under the Hood

Distributed Messaging

- Mesh Network
- Opinionated PUB/SUB system
- HTTP over TCP internal protocol

Service Discovery

Networked File System

Distributed Messaging

1# Setup a Grid

Setup a Grid: Install CLI

Install Grid CLI:

```
$ npm install grid-cli -g
```

Setup a Grid: Gridfile

Generate a Gridfile

```
$ grid new
```

*“It's like an access card
for servers that can be
shared with your team”*

```
>>> cat /tmp/Gridfile
#
# Gridfile Server Access ID Card
#
grid_name      = 'grid-test-1'
#grid_password =
```

Grid name + password

```
#keymetrics_public =
#keymetrics_secret =
servers = [
    'root@212.47.227.158',
    'root@163.172.151.155',
    'root@163.172.145.241'
]
```

Server Access List

```

2# Let's play with the Grid

gridcontrol

Base Project Structure

\$ grid sample

Main application that invokes services

Those are our services

```
root@master: ~/grid-pres/gc-grid
>>> tree
.
├── index.js
├── package.json
└── tasks
    ├── scrap-ip.js
    └── test.js

1 directory, 4 files
```

Triggering a Service Task

Do a request to get the current node IP

```
var request = require('request');

exports.getIp = function(data, cb) {
  request('https://api.ipify.org/?format=json', function (error, res, body) {
    if (error || res.statusCode != 200)
      return cb(error);
    return cb(null, body);
  });
};
```

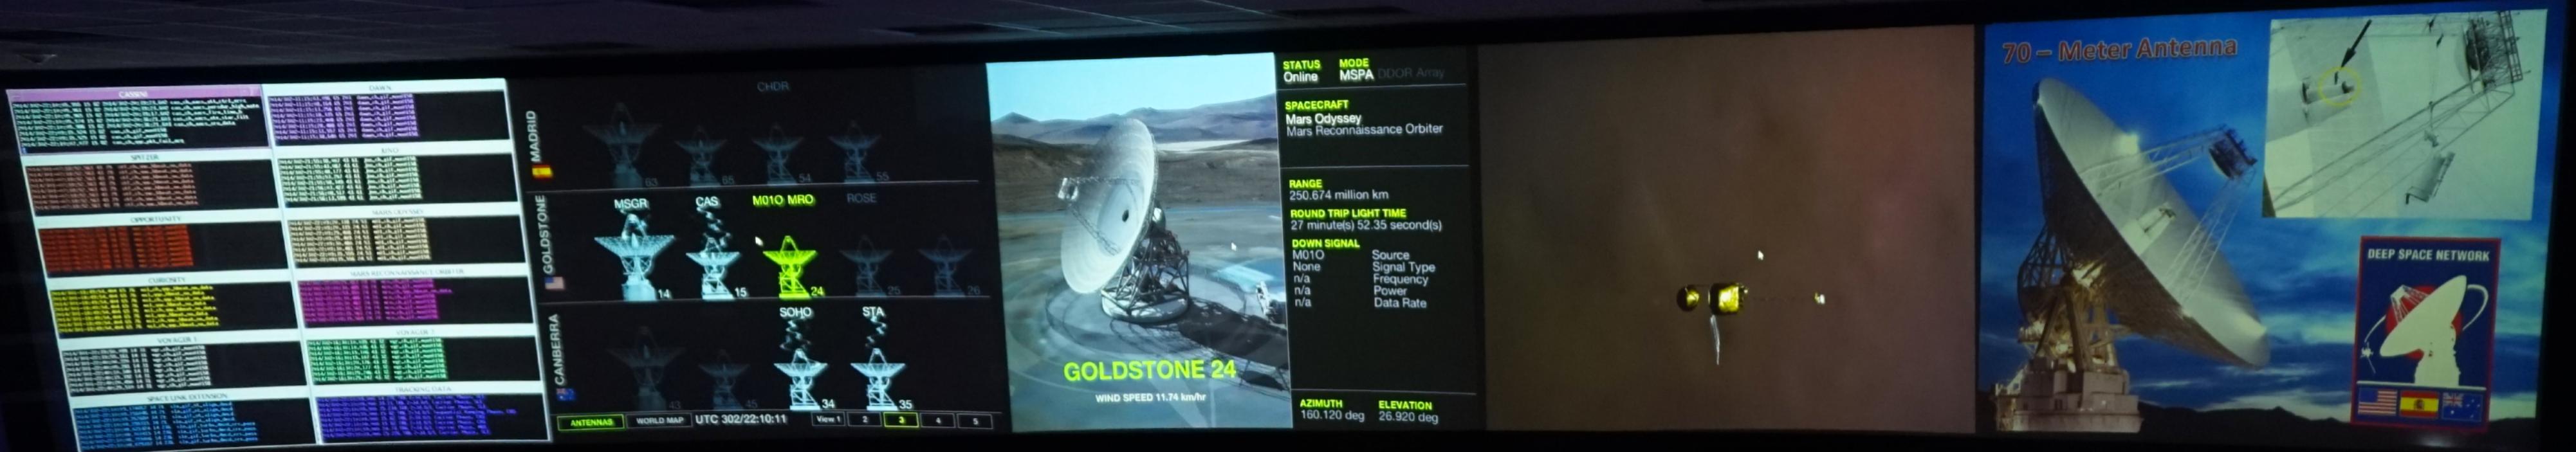

Invoke the function in round robin

```
var grid = require('grid-api');

grid.init({
  instances_per_task : 2
});

grid.invoke('req.getIp', function(err, result, node_meta) {
  console.log('Got result from node %s', node_meta.public_ip);
  console.log('Result = ', result);
});
```
